SUMMARY

Aspiring Java Software Engineer with hands-on experience in software engineering, software architecture, and software design across backend systems, secure communication gateways, and infrastructure tooling. Skilled in Java, Spring Boot, debugging software, and product development, with a strong foundation in Computer Science fundamentals (DSA, OOP, DBMS) and a track record of prioritizing deliverables to ship secure, reliable systems on schedule.

EXPERIENCE

Shiash Infotech

Java Full Stack Intern

Aug 2024 – Nov 2024

Chennai

- Built a secure gateway communication system in Java for multi-level organizational data exchange, applying core software design and software architecture principles across RESTful APIs and structured backend modules.
- Implemented AES/RSA encryption, secure data transmission protocols, and authentication mechanisms (token-based) to safeguard sensitive information.
- Designed backend business logic and flowcharts to map system workflows using Java, Spring Boot, and JDBC/Hibernate, integrating with MySQL for efficient data management.
- Collaborated in an Agile team using Git/GitHub for version control, debugging software issues, optimizing backend performance, and prioritizing sprint tasks to meet deadlines.

Genxlead Solution

Software Engineer

Nov 2024 – Mar 2025

Chennai

- Managed DNS records (A, MX, SPF, DKIM, PTR) and optimized traffic distribution across 10+ mailing servers, ensuring high availability and reliable email delivery.
- Configured and maintained PowerMTA for high-volume email delivery, monitoring server performance metrics and resolving delivery-related issues to improve deliverability rates.
- Troubleshoot and debugged SMTP, DNS, and email delivery issues by analyzing server logs, network configurations, and mail routing behavior, reducing bounce and failure rates.
- Collaborated with the infrastructure team on product development initiatives to improve mail server performance and network reliability in a Linux-based environment, prioritizing critical fixes under time constraints.

PROJECTS

Car Rental Management System

Spring Boot | MySQL | React

- Developed a full-stack car rental management system using Spring Boot, React, and MySQL to manage vehicles, users, bookings, and rental workflows.
- Implemented RESTful APIs using Spring Boot for vehicle, booking, user, and rental management with structured backend business logic.
- Built a responsive React frontend for user authentication, vehicle browsing, booking management, and rental-related interactions.
- Integrated MySQL with JPA/Hibernate for persistent data management and implemented entity relationships between users, vehicles, and bookings.
- Implemented JWT-based authentication and role-based access control to secure application features for different user roles.

Face Recognition Attendance System

Python | OpenCV

- Developed an AI-powered attendance management system using Python, OpenCV, and the face_recognition library to automate student identification and attendance tracking for 100+ students per session.
- Implemented real-time facial recognition with automated student profile management via a database-backed system, improving attendance accuracy and eliminating manual roll-call.
- Applied computer vision and software engineering techniques including face detection, feature extraction, and encoding-based recognition for scalable and efficient attendance monitoring.
- Architected the system for edge-device deployment (Raspberry Pi + camera module) as a planned enhancement, enabling low-cost, standalone attendance kiosks for college classroom deployment.

EDUCATION

Mailam Engineering College
Bachelor of Technology (B.Tech) in Information Technology

2020 – 2024
Tindivanam

- **Relevant Coursework:** Computer Science Fundamentals, Data Structures & Algorithms, Database Management Systems (DBMS), Operating Systems, Computer Networks, Object-Oriented Programming, Software Engineering, Servlets & JSP.
- **Final Year Project:** Built a Career Guidance Recommendation System in Python, applying machine learning-based recommendation logic and coding best practices to deliver personalized academic and career suggestions from user skills, interests, and preferences.

SKILLS

Languages:	Java, Python, SQL, JavaScript, HTML, CSS
Frameworks & Libraries:	Spring Boot, REST APIs, JDBC, JPA, Hibernate, OpenCV, Servlets
Frontend:	React, JavaScript, HTML, CSS
Databases:	MySQL
Tools & Platforms:	Git, GitHub, Postman, VS Code, IntelliJ IDEA
Core Concepts:	Software Engineering, Software Architecture, Software Design, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Debugging, Product Development, Coding, Security
